Make or Buy the State? Consulting in the Public Sector

Abstract: What objectives guide the organisation of public production? I examine the role of productivity gains and citizens' policy preferences in the context of consulting services in Italy. Using a natural experiment that relaxed limits on municipal consulting expenditure, I show that access to consulting improves productivity: it boosts public service output while lowering budgetary needs. These effects are accompanied by a reorganisation of internal capacity: municipalities spend less on in-house employees, reducing the number of low-skilled administrative workers. Despite these productivity gains, a large-scale survey with embedded AI-led interviews reveals that citizens are willing to pay higher taxes to protect public employment and cut consulting. Interviews and information experiments show that this is partly motivated by beliefs that consulting is economically wasteful. Information on the economic benefits of consulting reduces citizens' willingness to pay for public employment by 40%, but does not eliminate it. The residual willingness to pay is consistent with perceived local economic benefits from public sector employment. Citizens' policy preferences can help explain why states choose less productive arrangements. In a second survey, politicians and senior bureaucrats reduce their support for consulting when informed of citizens' demand for public employment. Taken together, these results suggest that states face a trade-off between improving productivity and responding to citizens' beliefs and preferences over how public production is organised.

Working papers

Polarized Technologies

with Gaia Dossi · CEP Discussion Paper No. 2116, 2026

Abstract: We study whether, and how, societal views about which problems are most important or worth solving are reflected in the direction of technological progress. Compared to Republican inventors, Democrats are more likely to patent technologies addressing climate-change mitigation or women's reproductive health and less likely to patent weapons. These gaps are not explained by differences in inventive ability, persist within organizations, have strengthened over the past two decades, and also appear in subsequent innovation. Together, societal views and their polarization appear to be important drivers of technological change, operating in part through inventors' technology choices, with implications for innovation policy.

The Geography of Development Programs

with Beyza Gulmezoglu and Eddy Zou

Abstract: International organisations devote substantial resources to reaching the poorest segments of the population. Yet we know little about how these resources are distributed and why. In this paper, we provide the first systematic evidence on where development programs go within countries. We assemble a new dataset linking roughly 5,000 geocoded World Bank projects across 130 countries since 1995 to district-level nighttime lights and complete records of the personnel assigned to each project. We find that aid flows disproportionately to richer areas: 51% of World Bank projects exhibit positive "site selection," landing in districts significantly richer than their neighbours in the same province. In contrast, only about one-third of World Bank projects are targeted to poorer districts. The pattern is pervasive across sectors and is not explained by population-based targeting. It does not reflect a gain in performance: projects in richer areas are no more successful according to the World Bank's own independent ratings. Supply-side factors related to World Bank personnel help explain where projects are located. World Bank project managers, who have substantial discretion over choosing project locations, account for a sizeable share of the total variation in site selection, more than year, sector, and country fixed effects combined. These findings suggest that where aid goes within countries is shaped not only by the needs of the recipient country but also by the organizational structure of the agencies that deliver it.

The Cost of Identity: Theory and Experimental Evidence from the Energy Labour Market

with Gaia Dossi and Matthew OBrien

Abstract: How do private and social identities shape occupational choice? We study this question in the energy labor market, where firms whose core business is oil and gas are also central to the green transition. In a survey experiment with 1,350 UK first-time job seekers, we randomize the employer's core business, the team's focus, and the wage across job postings. We measure green identity from open-ended and closed-ended answers, capturing how central the environment is to respondents' sense of self. Relative to a generic energy firm, respondents with green identities require a 30% wage premium to join an oil and gas firm and forgo 20% of their salary to join a renewables firm. The team's focus also matters: green respondents value a renewables team at 25% of their salary. To separate private from social identity, we randomize whether interest in a firm-sponsored training program is private or disclosed with the respondent's name and photo. Disclosure lowers green respondents' interest in the oil and gas firm's program from 41% to 28% but leaves the renewables firm's program unaffected. We develop a model of occupational choice in which individuals have private preferences over jobs and derive utility from aligning with social norms. In structural simulations, we study how the social environment shapes the allocation of talent and aggregate productivity, and whether it accelerates or delays the green transition.

Work in progress

A Guide on How to Interview with AI

Short abstract: AI-led interviews are a key tool for understanding people's views and reasoning at scale. This paper provides guidance on when and how to use them in online surveys, highlighting their potential benefits and costs.

Contributive Justice in the Workplace

with Jakob Akesson and Tim Besley

Short abstract: Do employees value their employer's contribution to society? We link Indian firm-level financial data to employee job reviews and study the introduction of mandatory corporate social responsibility spending. Using an event-study design, we find that firms subject to the mandate increase their social spending and that their employees report higher job satisfaction. These findings suggest that workers derive value from their employers' contributions to society.

Organizations vs Occupations: Drivers of Job Satisfaction

with Jakob Akesson and Tim Besley

Short abstract: We combine existing surveys with large-scale employee-review data worldwide to examine which aspects of work are most closely associated with job satisfaction. We use review text to measure features of the work environment and relate them to overall satisfaction, alongside occupation and pay. Most of the variation in job satisfaction occurs within occupations. Across both data sources, management emerges as the strongest correlate of job satisfaction, ahead of pay.

Seminars & conferences

excluding presented by coauthors

** scheduled*

LSE POID Research Seminar (London, UK); BSE Summer Forum (Barcelona, Spain); LSE Department of Economics	2026
IEB Workshop on Political Economy (Barcelona, Spain); UniCredit Marco Fanno Alumni Workshop (Turin, Italy); Environmental Populism Conference (London, UK); NICEP Conference (Nottingham, UK); LSE PSPE Seminar (London, UK); LSE Department of Economics	2025
Hayek Workshop on Institutions and Political Economy in Historical Perspective (London, UK); Society for Economic Dynamics Annual Meeting (Barcelona, Spain); EEA-ESEM Annual Congress (Rotterdam, Netherlands); ASREC Europe Conference (Thessaloniki, Greece); Bristol Economics of Innovation Workshop (Bristol, UK, *invited*); Lewis Lab Graduate Student Workshop (Manchester, UK); LSE Department of Economics	2024
LSE POID Research Seminar (London, UK); LSE PSPE Seminar (London, UK); ACES Summer School in Political Economy (Berkeley, USA); LSE Department of Economics; Bocconi Christmas Workshop (Milan, Italy); Bocconi Summer Workshop (Milan, Italy)	2022–2023

Research grants

Total grant funding: approximately $51,000 (EUR 44,000)

STICERD PhD Grant, joint with Beyza Gulmezoglu and Eddy Zou (£5,000)	2026
Global School of Sustainability PhD Small Project Grant (£5,000)	2026
Programme on Cohesive Capitalism PhD Grant (£5,000)	2026
STICERD PhD Grant (£5,190)	2026
Google Cloud Research Credits Program ($980)	2026
STICERD PhD Grant (£5,000)	2024
STICERD PhD Grant, joint with Gaia Dossi (£5,000)	2023
STICERD Michio Morishima Fund (£700)	2023
LSE Phelan Research Grant (£2,500)	2023

	STICERD Hayek Programme PhD Grant, joint with Gaia Dossi (£4,000)	2022
Awards	Cohesive Capitalism PhD scholarship	2024
	LSE Teaching Bonus	2023–2025
	LSE Class Teacher Award, based on student ratings	2023
	Outstanding Distinction for the Bonaldo Stringher scholarship, Bank of Italy	2022
	LSE Economics Departmental Award	2021
	UniCredit Foundation *Fabrizio Saccomanni Scholarship*	2021
	Fondazione Famiglia Legnanese scholarship	2019
Research experience	Research assistant to Tim Besley (London School of Economics)	2025–2026
	Research assistant to Michael Callen (International Growth Centre & London School of Economics)	2023
	Research assistant to Gilat Levy and Ronny Razin (London School of Economics)	2022
	Research assistant to Paolo Pinotti (Bocconi University)	2020–2021
	IGIER visiting student, mentored by Guido Tabellini (Bocconi University)	2019–2021
	Research assistant to Swapnil Singh (Central Bank of Lithuania)	2019
Teaching	**London School of Economics and Political Science**	
	Graduate Teaching Assistant for:	
	– Introduction to Statistics (PP430E), Executive Master of Public Administration and Policy	2024
	– Introduction to Quantitative Methods (PP408), Master of Public Administration	2024
	– Pre-Sessional Coding and Mathematics Bootcamp (PP407), Master in Data Science for Policy	2024
	– Econometrics 1 (EC1C1), undergraduate	2023–2025
	– Microeconomics 1 (EC1A3), undergraduate	2022
	Graduate Teaching Fellow for:	
	– Quantitative Methods for Public Policy (PP402), Master of Public Policy	2023
Academic service	**Referee:** Economica; Journal of Economic Behavior and Organization; Journal of Law, Economics and Organization	
	Discussant: BSE Summer Forum (2026); Arthur Lewis Lab Student Workshop (University of Manchester, 2024)	
	Organizer: Environmental Populism Conference (2025); LSE Applied Microeconomics Student-Only Seminar (2023–2024)	
	Co-Founder: LSE Applied Microeconomics Student-Only Seminar (2023)	
	Mentoring: LSE Academic Mentor for undergraduate students	2023–2024
	Other: Managing LSE Economics database for Research Excellence Framework	2025–2026
